

Change paths v0.5

Introduction

Simple utility used to change the paths of bitmaps, proxies, point cache files or IES lights.

It's simple to use: select what you want to change the path through the checkboxes. Then enter the path you wish to change and the new path. For example, if you have some bitmaps in the scene located on

`C:\works\textures\xxxxx...`

and you need to change to

`C:\old_works\textures\xxxxx`

you must enter, for example, `"\works"` at the first field, and `"\old_works"` at the second field. Push change and all the strings containing `"\works"` will be replaced by `"\old_works"`. For example:

`"C:\works\textures\woods\teak22.tga"` will be changed to `"C:\old_works\textures\woods\teak22.tga"`
